

i-Tech installs Juniper Network in new green data centre

KUALA LUMPUR: i-Tech Network Solutions Sdn Bhd (i-Tech), the technology arm of Ireka Corp Bhd, has installed Juniper Networks' integrated portfolio of switches, routers and security solutions in its new tier-3 green data centre, SAFEHOUSE.

The centre will provide customers with disaster recovery solutions, co-loc-

tion and managed services.

The simplified data centre architecture and highly-streamlined operational model enables i-Tech to introduce a new-generation of services based on cloud computing, without any constraints at the network level, it said in a statement.

With IBM as its system integrator, SAFEHOUSE has

been designed as a highly energy-efficient green data centre, helping i-Tech maintain a low total cost of ownership and appeal to clients and organisations that places sustainability as a top priority, it added.

The data centre installed technologies from IBM, Schneider Electric and Juniper Networks and has a capacity of about 100 racks.
